Week 2 — Forensic Accounting Case

ACC 4510 • Reliability Tire Company • Run the analysis and document discrepancies

Summary

Now that you have a plan in place, this assignment will provide you with all of the client documents. Your job is to execute the plan your group built in Week 1 — run all six fraud checks against every claim across all six retailers, calculate the correct reimbursement amounts, and document every discrepancy you find. Think of this as the fieldwork phase of the engagement.

Key concepts to keep in mind

- **Not every discrepancy is fraud** — a miscalculated reimbursement amount may be an honest error. Document it either way, but distinguish between errors and intentional misrepresentation
- **Evidence specificity matters** — "the amount looks wrong" is not sufficient. You need to state exactly what was claimed, what it should be, and which rule produces the correct figure
- **The sales ledger is your backstop** — even if an invoice exists and the details match, a sale cannot be legitimate if the retailer had not yet received inventory from Reliability at that date
- Use AI tools to help you work efficiently — but you are responsible for verifying the output. AI can make calculation errors. Spot-check your results manually

New Documents Available This Week

All Retailer Invoices
(https://uvu.instructure.com/courses/644179/ wrap=1)
(https://uvu.instructure.com/courses/644179/ download_frd=1)

Complete invoice sets for every retailer. Use these to verify each

Reliability Sales Ledger
(https://uvu.instructure.com/courses/644179/ wrap=1)
(https://uvu.instructure.com/courses/644179/ download_frd=1)

Reliability's full internal record of all sales in 2012–2013. Critical for catching impossible sale dates.

Table of Claims
(https://uvu.instructure.com/courses/644179/fi wrap=1)
(https://uvu.instructure.com/courses/644179/fi download_frd=1)

All six retailers' submitted reimbursement requests. This is primary dataset you are auditing.

claim individually against the source document.

The six fraud checks to run on every claim

1. **Date validity** — StopSure tires were only sold from January 30 to December 3, 2013. Flag any purchase date outside this window as ineligible.
2. **Invoice cross-reference** — Match every claim against the source invoices. Flag any claim with no matching invoice, or where the invoice details (customer name, tire style, quantity, width, diameter) do not match what was claimed.
3. **Sales ledger cross-reference** — Confirm the retailer had received inventory from Reliability before the claimed sale date. A retailer cannot sell a tire they did not yet own.
4. **Pricing accuracy** — Recalculate the correct retailer reimbursement and customer inconvenience payment for every claim using your price model. Flag any claim where the retailer's calculation is incorrect.
5. **Duplicate claims** — Check for the same invoice number, customer name, or date/amount combination appearing more than once across any retailer's submission.
6. **Non-StopSure tires** — Only tires from the StopSure product line are eligible for reimbursement. Flag any claim for a different product.

IN CLASS **What we'll do together**

- Review your SCOPE Framework write-ups from Week 1 and discuss key themes as a class
- Work through the invoice cross-reference process together — how to match a claim to an invoice and what constitutes a meaningful discrepancy
- Discuss the sales ledger and how to identify an impossible sale date
- Troubleshoot any pricing model issues and confirm everyone's output is producing the correct results

THIS WEEK **Execute the forensic accounting**

1. Run all six fraud checks across every claim from all six retailers. Every claim should end with a status: clean, pricing error, or fraudulent — with a specific documented reason for anything flagged.
2. Organize your findings into a structured exceptions table. **Use this file to format your deliverable (https://uvu.instructure.com/courses/644179/files/132850797?wrap=1)** **(https://uvu.instructure.com/courses/644179/files/132850797/download?download_frd=1)**. Each flagged item should include the retailer, customer, invoice number, issue type, claimed amount, and the dollar impact.
3. Produce a corrected payment schedule showing what each retailer is actually owed after exceptions are removed or corrected.

Week 2 Deliverable — Group Submission

After you run all six fraud checks run across every claim, you should be able to document and categorize each discrepancy. Use **this template (https://uvu.instructure.com/courses/644179/files/132850797?wrap=1)** **(https://uvu.instructure.com/courses/644179/files/132850797/download?download_frd=1)** to document your work and turn in on this assignment.

1. **Exceptions table** — A structured record of every flagged item with retailer, customer, invoice number, issue type, claimed amount, and dollar impact. *(tab 1 on the template)*
2. **Corrected payment schedule** — The revised amount owed to each retailer and each customer after all exceptions are applied. *(tab 2 on the template)*
